Meeting Log for Iteration 1

Meeting 1: Feb 8 2023, Wednesday. 11:30 AM to 12:45 PM
Who: Nikhil, Fahad, Adil, Jay
Mode: In person
Summary

- Brainstormed ways that we can divide work and collectively work on the same piece of code.
- Decided to create branches for each member of GitHub so that they can commit and push their work rather than pushing their work directly on to the main branch.
- Setup GitHub Desktop on everyone's machine and their respective branches were set to the default branch.
- Explored strategies for building our application. It was decided that we could use one of the many different open-source calendar APIs available and modify it based on our ideas and features. The professor was consulted, and he confirmed this can be done.
- Collected different APIs that could be used and collectively finalized the calendar API that will be used.
- 'Plan Perfect' was chosen to be our calendar application's official name.
- What each person will be implementing in the project was also decided.

Meeting 2: Feb 15 2023, Wednesday. 11:30 AM to 12:45 PM
Who: Nikhil, Jay, Fahad, Yaqub
Mode: In person

- The chosen API was imported into the repository by Nikhil.
- Streamlined our workflow by having everyone switch IDEs
- Fahad's work was pushed to main after everyone's approval.
- Highlighted and discussed different problems that were evident during implementation.
- Began working on test cases for the application
- Also began working on the UML for the application.
